Fascination

Bioresonance according to Paul Schmidt

In recent years energetic procedures and especially Bioresonance according to Paul Schmidt have been able to develop very dynamically. People who have had the chance to experience the fascination of this cause-oriented treatment approach will often spontaneously become ambassadors of this methodology.

Let us briefly depict the complex theoretical connections of quantum physics with the application of Bioresonance according to Paul Schmidt and implement them in practice.

If 200 years ago people still believed that any kind of matter was solid and indivisible, then the work of Bohr and Sommerfeld made it clear that matter must be composed of smaller parts. According to this model, our matter consists of atoms, which are not further divisible with chemical methods. Atoms consist of atomic nuclei with positive electrical charge (protons and neutrons) and also a shell with a negative electrical charge. If everything, matter, plants, animals, human beings, food products, etc, are constructed of this, then the question arises: what do protons, neutrons and electrons consist of ultimately? Explanations of this are found in quantum physics in the works of many famous scientists such as Max Planck, Heisenberg or Luis-Victor Duc de Broglie. The last named scientist originated the wave theory, which shows that not only light, but every sort of matter ultimately has the nature of waves.

Everything is built of oscillations and waves

If you accept that everything is ultimately composed of oscillations and waves and that these interact (enter into resonance), so atoms and molecules are ultimately oscillation patterns and molecule formations are larger oscillation patterns, then the significance accorded to Bioresonance according to Paul Schmidt, and that which is still to be accorded to it in the future becomes clear.

This explains why homeopathy functions, why gemstone therapy can make sense (with the appropriate frequency spectra) and that our food can actually be our medicine (Hippocrates).

Just as many people today ridicule the medicine of 200 years ago, it must be clear that in 200 years our current medical approaches will be ridiculed. The next great medical advance can only be made if we dedicate ourselves to the actual smallest building blocks of our organism, and pay attention to their oscillations and oscillation patterns.

30 years of Bioresonance according to Paul Schmidt

Bioresonance according to Paul Schmidt has been dedicated for 30 years now to research and use of frequency spectra of substances, tissues, and regulation processes, and it applies these with appropriate device technology for the well-being of plants, animals and human beings.

The operating principle can be explained and understood quickly. Just as sunlight (=sinusoidal frequency spectrum) stimulates regulations, e.g. ,

Paul Schmidt discovered the bioresonance therapy procedure named for him.

pigmentation or the vitamin D balance in our organism, Paul Schmidt discovered many additional frequency spectra that in turn cause their own regulations. With the bioresonance devices Rayocomp PS 100 polar and the smaller and portable Rayocomp PS 10, these spectra are transferred using so-called detectors to the human body or the animal body and resonated there. With the universally applicable procedure of Bioresonance according to

Paul Schmidt it is possible to work both exogenously, by imposing from outside onto the body, and also endogenously mostly using bodily secretions.

The book on the procedure

Comprehensive information on the procedure can be found in the fourth edition of the standard work on Bioresonance according to Paul Schmidt. Since 1994, the author, professor and engineering graduate (TH) Dietmar Heimes, has been developing the bioresonance procedure named for its inventor Paul Schmidt.

The standard work on Bioresonance according to Paul Schmidt, 1st edition

Important legal information:

Please be aware that the connections presented here in part go beyond the dominant medical opinions, and the effect of bioenergetic oscillations is to date neither accepted nor recognized by classic conventional medicine.

World debut - the new

RAYOSCAN

from the company Rayonex Biomedical GmbH

Already in 1975 when Paul Schmidt began with his considerations on bioresonance it was his dream: a measurement procedure that detects the helpful individual frequency patterns of the patient automatically without the therapist's intervention, thus making these patterns available for a subsequent energetic therapy.

Paul Schmidt took into account the radiesthetic measurement procedure developed by him at that time that the patient's body energetics must not be modified by the measurement. For this reason, for example, he did not consider the measurement procedure of electro-acupuncture on the meridian points, since this can traumatise or modify the meridian points by applying pressure several times. A special problem of this method is moreover that the therapist touches the patient during measurement and hence can participate in a direct energetic exchange with the patient - from the energetic standpoint not optimal either for the patient or for the therapist.

Now Bioresonance to Paul Schmidt consists today of very much different frequency patterns (updated April 2014: 1766 different RAH-programmes), each one of which can be important for the body. Moreover the frequency spectra of a cat, a dog, a horse are different from that of a human being. The acupuncturist must examine different frequency spectra than a homeopath, dietician or building biologist. How can the very different individual frequency patterns be analysed or scanned without the therapist himself ultimately testing, becoming part of the test or influencing the test? How can this take place with a system that can be explained and understood by the patient in an analysis period and that is acceptable for

the therapist? More and more questions that seemed unsurmountable at the beginning.

An automatic measurement system - this was already clear to Paul Schmidt - offers great benefits:

- 1 Every therapist can enter the world of Bioresonance according to Paul Schmidt with an automatic test system such as Rayoscan, since he does not have to learn a test procedure with time and effort.
- 2 Time management in the individual practice is considerably easier, since the therapist can delegate the analysis and loses no time in testing. Thus finally with Bioresonance according to Paul Schmidt even the established physician has a chance to work and offer assistance with little time per patient - whether it is in his own practice or with the Rayocomp PS 10 in home treatment, e.g., in the case of patients who are not mobile.
- 3 During an automatic measurement procedure there is no direct energy exchange - for the well-being of the patient and the therapist.

The new measurement system Rayoscan is guided by the up to now most efficient and also most time-consuming test combination of Bioresonance according to Paul Schmidt. This consists at present of a so-called range value test and an RAH test.

In the range value test the whole frequency range of Bioresonance according to Paul Schmidt is tested step by step using a radiesthetic procedure

in a defined step length. This creates the so-called energetic fingerprint of the person (or of the animal, of the plant, ...). The combination of the 'resonance points' found in this way reflects the current need for regulation, and it is a combination that is as individual as the organism examined itself.

The Rayonex Analysis and Harmonisation System (RAH)

In a second step using the RAH special and also complex regulation structures are tested energetically. The subsequent combination composed of the individual resonance points from the range value test and the RAH programmes is stored on a RAH Green-Card or in the patient history of the Rayocomp PS 1000 polar and can then form the basis for the harmonisation. Thus already today a therapist can perform the tests on his Rayocomp PS 1000, store them on a RAH Green Card and give them to the patient for home therapy with a portable Rayocomp PS 10.

Since this combination represents the most efficient treatment method of Bioresonance according to Paul Schmidt at the moment, Rayoscan should be used here to automatically detect both individual frequency spectra and also RAH programmes.

How specifically does the new Rayoscan work and how is it applied?

In the bioresonance device Rayocomp PS 1000 polar, the new Rayoscan module is available starting in May 2014. In this manner Rayonex supports especially the current owners of the device, for the new module can also be integrated into existing Rayocomp PS 1000 polar devices (in accordance with the age of Rayocomp PS 1000 polar different costs apply).

Rayonex has pursued for years the strategy of modular design. For this reason there is not a new generation of devices every couple years, but rather the existing devices can be updated with software and hardware updates with the respective desired module. This is very much appreciated by users, since costs are reduced, the device remains valuable and even

after many years constitutes a perfect investment, especially since there are next to no used devices on the market given the permanent update option.

With the Rayoscan module, a high-quality "ECG test system" is integrated into the Rayocomp PS 1000 polar. The procedure, which is the subject of a patent application, is based on the knowledge that stimulation to the organism in the summation of all regulation processes is also measurable as modification in the heart beat (e.g., heart rate, intensity, gradual changes).

The RAH Green Card

Without a time investment on the therapist's part, the Rayoscan determines using a 4-point derivative which frequencies of the bioresonance device would be advantageous for energetic harmonisation, and on this basis it produces comprehensive energetic analyses.

Rayoscan calculates anomalies invisible for the human eye from the data of the 4-point derivative, and in this manner it determines the resonance points.

These changes are very small, and calculating them requires an immense mathematical effort, which could only be solved by incorporating mathematicians and university institutions. Since the Rayoscan project was sponsored by the German Federal Republic, it could finally be completed.

Rayoscan is a development project sponsored by the Federal Republic of Germany.

Even if Rayoscan receives the signals using the well-known ECG-electrodes, it is nevertheless not typical ECG-system for evaluation of the heart curve, but rather

a system that in response to a stimulus (frequency) collects heart data, which are calculated in conclusion. In specific, the Rayocomp, as in the range value test, tunes to a frequency value and stores the heart's reactions. After an automatic online precalculation and evaluation of the respective heart reaction, a new frequency value is applied to the organism, etc. After the relevant frequency band (duration approx. 12 minutes) is set and the data are collected, the Rayocomp PS 1000 polar begins with the calculations and finally it identifies the frequencies that produce the greatest reactions.

Then with these results in a further step a reference energetic analysis can be calculated for all 1766 currently existing RAH programmes (from acupuncture meridians through physiology to Bach flowers and Schüssler salts).

If you enter into the system that, e.g., 45 minutes are available for energetic therapy, then the system calculates from the measurements the appropriate individual frequencies and RAH-programmes that are best suited and transfers them directly to the harmonisation or it stores them on a RAH Green-Card, in the patient history or the Rayocomp PS 1000 polar prints them.

In spite of the greatest mathematical complexity of the calculation, an extremely simple operation for the user has been achieved. The use of Rayoscan can be learned in a few hours.

It is not only the therapist who profits from the system, the patient profits especially since in the briefest time period he receives a comprehensive analysis of his energetic situation and he can use it for treatment.

Since experience dictates that energetic regulation deficits appear earlier than, e.g., irregular blood tests, Rayoscan cannot be a typical, conventional medical diagnostic system, but rather an analysis system for energetic regulation deficits.

The new RAH-Vet

for the Rayocomp PS 1000 polar

At the beginning the role of Bioresonance according to Paul Schmidt in veterinary medicine was already discussed. For the whole system the successful results with animals are of course especially interesting because the successful treatment of a horse, a dog or a cat cannot be attributed to the placebo effect. In brief, a successfully treated dog will not have convinced himself of the success of treatment.

In 2011 for the first time the veterinary medical RAH module M11 became available for the portable bioresonance device, the Rayocomp PS 10, with more than 600 animal-specific RAH programmes. Since then almost 1000 animal therapists have decided on this system. In spite of this, at the very moment of introduction, users expressed a desire for a veterinary medicine high-end module for the Rayocomp PS 1000. Development took three years. Starting in April 2014 the new RAH Vet for the Rayocomp PS 1000 polar is available with the following range of functions:

- Comprehensive frequency collection for horses, dogs and cats
- Chakra activation with visualising of chakras on the animal
- Complete range of functions for acupuncture oscillation therapy. Every meridian point can be visualised on the horse, dog or cat and used to sedate or to tone.
- The RAH is integrated for the full range of services including visualisation for all three types of animal (including provision of system programmes) both in analysis and also in harmonisation.
- Comprehensive functions for energetic animal feed test, energetic drinking water test or energetic allergen test.

- Integration of energetic testing on Bach flowers and Schüssler salts, and also use of own secretions for endogenous bioresonance therapy applications.

With the RAH Vet for Rayocomp PS 1000 polar, energetic processes can now be analysed, visualised and harmonised also for horses, dogs and cats.

Since Rayocomp PS 1000 polar works with an integrated touchscreen, no additional screen is necessary. Operation is almost self-explanatory and very easy to learn.

Due to the continuing development of the Vet-module, approx. 1200 different RAH programmes, and hence frequency compositions are available to the veterinary user today. These RAH programmes are also a component of the Vet-module in the portable Rayocomp PS 10. Thus it is now possible for the first time in the veterinary area to perform the energetic analysis in Rayocomp PS 1000 polar, to save the results on a RAH Green Card, and to use them easily in home therapy with a Rayocomp PS 10.

With the RAH Vet-module for Rayocomp PS 1000 polar and Rayocomp PS 10, an energetic analysis and harmonisation system is available that is as perfect as in human medicine.

The new Rayocomp PS 10 basic

Another special feature of Bioresonance according to Paul Schmidt is included in the device philosophy of Rayonex Biomedical GmbH. For in the Rayocomp PS 1000 polar not only a high-end bioresonance device is available but also with the Rayocomp PS 10 a considerably smaller and portable bioresonance therapy device. The smaller device itself is outstandingly suited for entry into the world of bioresonance therapy, since using the total of 12 software modules for integration the range of services can be adapted optimally to the respective needs. Regardless of whether it is a therapist, home patient, veterinarian, researcher, building biologist or nutritionist, they can all adapt the PS 10 optimally to their own needs due to the modular design.

price. The Rayocomp PS 10 basic due to its range of functions can only automatically run a RAH Green Card, i.e., the individual frequency values stored on it and RAH programmes - nothing more. Due to the smaller range of functions, the Rayocomp PS 10 basic is less expensive than a classic Rayocomp PS 10 with RAH module M9.

One of the benefits for the therapist is that no programmes other than those established by him in the home therapy can be harmonised and the therapy can as a whole be better

evaluated. Of course a Rayocomp PS 10 basic is also an ideal option for creating an inexpensive, additional treatment station in your own practice.

Less expensive than a classic Rayocomp PS 10

The Rayocomp PS 10 is used increasingly in human medicine for home therapy patients. For this purpose, the therapist drafts the energetic analysis at his practice on his Rayocomp PS 1000 and saves it for the patient on the RAH Green Card. The patient, who in turn owns a Rayocomp PS 10 or has leased one, can begin very easily (plug in Rayocomp PS 10, insert RAH Green Card, connect detector) with the home therapy, which takes place mostly at night while sleeping. The new Rayocomp PS 10 basic was created specifically for this case, since experience shows that the range of functions of Rayocomp PS 10 was often much too wide and unused services of the device were being unnecessarily included in the

Perfection all around!

Especially with the new Rayoscan, which can be incorporated into the Rayocomp PS 1000 polar, and which can calculate automatically the patient's necessary single fundamental frequency values and the necessary RAH programmes, the Rayocomp PS 10 basic makes even more sense. For in this manner a closed therapy chain is created: therapist – patient – measurement – saving on the RAH Green Card - harmonisation on a bioresonance therapy device according to Paul Schmidt.

Especially for patients who are not mobile, or for patients who live at a great distance from their therapist or also for patients who are very busy in their career, the new Rayocomp PS 10 basic will be an ideal aid.

IN SUMMARY

Video on Bioresonance according to Paul Schmidt

A few weeks ago the new video on Bioresonance according to Paul Schmidt was completed. It is an impressive, 17-minute presentation of the philosophy and range of services of the procedure. You can see the video on Rayonex's own Youtube channel at: www.youtube.com/rayonexgmbh or at the direct link: www.youtube.com/watch?v=EdJ52wgXIPg

We are pleased to provide you with the video for your own presentations, e.g., at your practice or for your own lectures. You can download the video at the following address: www.paul-schmidt-akademie.de, then click on Rayonex Wiki and Download.

Rayocomp PS 10 - training video in the Rayonex Wiki

Bioresonance according to Paul Schmidt is already used in many countries in the world. The questions that are posed around the world about this cause-oriented system are often very similar.

For this reason, a unified, international, Internet-based training platform was created, called the Rayonex Wiki. At the moment more than 320 training videos are available online. For example, the use of Rayocomp PS 10 can already be learned using the training video in the Rayonex Wiki. **Access data:** User name: Rayonex, Password: Wiki.

The new Rayonex Wiki is an additional milestone, and it inspires a very good feeling by providing our users at home and abroad throughout the world at any time of day with access to information about Bioresonance according to Paul Schmidt.

For example, here is the button „MODE“ with which you can select different main menu points on the device, e.g., Bioresonance according to Paul Schmidt or the RAH (Rayonex Analysis and Harmonisation System).

In the Rayonex Wiki there are more than 320 videos that explain the function of the most diverse devices and products of Bioresonance according to Paul Schmidt (illustration: Rayocomp PS 10).

The new module M7 for building biology

Within the cause-oriented treatment system of Bioresonance according to Paul Schmidt, building biology plays an essential role. Experience shows that it makes sense not only to treat the patient, but also his living space and environment.

Disturbances due to geopathy, electrosmog or also mildew can be detected in this way, and solutions can be developed. In Germany alone, more than 100 building biology measurement technicians have been trained at the Paul Schmidt Academy.

In the future this area of activity will take on increasing significance. At Rayonex Biomedical GmbH we wish to give special support to work in building biology with the new RAH module M7 for Rayocomp PS 10. This module makes all frequency patterns relevant for building biology available so that it can be used to perform energetic analyses of the living environment.

The new module M7 for the Rayocomp PS 10 offers ideal support to building biology measurement technicians

Rental is increasingly popular

For some years now Rayonex offers - unusual in the market - not only purchase of the bioresonance devices but also the rental. At present more than 2500 users rent Rayonex products.

Why do they do this?

- 1 If servicing becomes necessary for the rented product, it is free of charge for the user (except for shipping charges).
- 2 A rental agreement has a minimum duration of six months. After this period the rental contract may

be terminated on a monthly basis - and so it is a fair system.

- 3 If a company such as Rayonex Biomedical GmbH rents its own products with a short minimum rental period, this is great proof of confidence in its own products. Many users see this, and they appreciate it.
- 4 It often happens that during the rental period the user wishes to acquire the device. In this case, the rental contract expires immediately.
